

Kiaura Collection™ Lounge Seating

Sophisticated design details and inviting forms help create welcoming spaces where people can relax, recharge, and engage. The Kiaura Collection lounge seating built with Cognetic Technology™, designed and invented by Aaron DeJule, responds to each person's natural movement while seated, creating a dynamic sitting experience that supports comfort, connection, and well-being.

Key Features

A Intuitive Lock

Integrated lock mechanism allows users to activate the Cognetic Technology motion while seated and automatically locks when unoccupied.

B Cognetic Technology

Patented technology enables three-dimensional movement, allowing natural micro-adjustments that support comfort, focus, and well-being.

C Backrest Profiles

Available in mid-back, high-back, high-back with headrest, and high-back with privacy headrest styles to support a range of applications and user preferences.

D Arm Options

Available with arms or armless configurations across lounge chair models to support a variety of spaces and applications.

E Elevated Materials

Contrasting and non-contrasting upholstery options, customizable thread colors, and optional welt detailing allow designers to tailor the aesthetic to each space.

F Four-Star Base

Available as polished aluminum or painted aluminum to match the Cognetic Technology and seat shroud. Choose from floor mounts¹ or four glide² options: plastic, felt, steel, or non-skid.

¹ Floor mounts do not include connection hardware.

² Glides include 1/2" of leveling adjustment.

G Enhanced Cleanability

Convenient push-through design ensures dirt and debris do not get trapped between the seat and base.

H Complementing Ottoman

Designed to complement the lounge seating, the static ottoman enhances comfort and creates a more relaxed, inviting lounge experience.

Kiaura Collection

The Kiaura Collection, designed by Aaron DeJule, is the first seating line built with Cognetic Technology. Invented by Aaron DeJule, Cognetic Technology uses gravity and the body's natural movement to create a unique three-dimensional orbital motion that promotes continuous balance while seated. The result is a dynamic sitting experience designed to support comfort, focus, engagement, and overall human performance, introducing a new category of seating centered on flow, not stillness.
