Passel® Desking System

Designed to break down the barriers of traditional panel systems. Passel rail-based desking system introduces a lighter, more open approach to space planning that encourages connection, focus, and flow.

Key Features

A **Rail Architecture**

Rail-based planning establishes repeatable centerlines and attachment points for worksurfaces.

B **Power/Data Accessibility**

Rail framework accommodates internal routing with one point of connection to eliminate cluttered cords.

C **Worksurface Compatibility**

Supports fixed tables within the rail plan; or pairs with standalone height-adjustable tables.

D **Light-Scale Components**

Slim profiles reduce visual mass while preserving structural clarity.

E **Flexible Configurations**

Supports focus stations, side-by-side benches, and adjacent collaboration nodes.
